

## Hackathon Day 3

Prepared by: Zahida Raees

### API Integration & Data Migration

This documentation outlines the task I have completed during Day 3 of the Template 6 for the Marketplace hackathon. It covers Sanity installation in the duplicate of template 6, creation of project in sanity, creation of token, integration of Sanity with Nextjs's existing project. Along with this creation of migration file from the provided github url , performed custom migration, data integration from Sanity, schema creation, and displaying data using GROQ queries in a Next.js application. Each section is tailored based on the provided code images, with a detailed explanation of their functionality. Here are the screen shots of my steps:

```

The screenshot shows the Sanity Studio interface with the 'Tokens' section open. At the top, there's a navigation bar with a user profile, a 'sanity.io/manage/personal/project/godhjrui/api' URL, and various icons. Below the navigation is a header with tabs: 'Getting started', 'Overview', 'Members', 'Studios', 'Datasets', 'Access', 'Activity', 'Usage', 'Plan', 'API' (which is selected), and 'Settings'. A sub-header 'Tokens' is displayed above a list of tokens. The first token listed is 'ecommerce hackathon 3 day 3 import api'. The 'Webhooks' tab is currently selected. The 'CORS origins' tab is also visible. The 'Tokens' tab is selected. The 'Name' field contains 'ecommerce hackathon 3 day 3 import api'. The 'Permissions' section allows selecting from 'Contributor', 'Developer', 'Editor', and 'Viewer' roles. The 'Developer' role is selected. The 'Contributor' role is described as 'Read and write access to draft content within all datasets, with no access to project settings. (Tokens: read+write drafts)'. The 'Deploy Studio (Token only)' role is described as 'Access to deploy Sanity Studio and GraphQL APIs to our hosted service.'. The 'Developer' role is described as 'Read and write access to all datasets, with access to project settings for developers. (Tokens: read+write)'. The 'Editor' role is described as 'Read and write access to all datasets, with limited access to project settings. (Tokens: read+write)'. The screenshot shows the VS Code interface with the title bar "Ecommerce-hackaton03-day3". The Explorer sidebar on the left shows the project structure under "ECOMMERCE-HACKATON03-DAY3". The "schemaTypes" folder contains "index.ts" and "TS products.ts". The "TS products.ts" file is open in the editor, displaying the following TypeScript code:

```
src > sanity > schemaTypes > TS products.ts > [e] product
1 import { defineType } from "sanity"
2
3 export const product = defineType({
4   name: "product",
5   title: "Product",
6   type: "document",
7   fields: [
8     {
9       name: "title",
10      title: "Title",
11      validation: (rule) => rule.required(),
12      type: "string"
13    },
14    {
15      name: "description",
16      type: "text",
17      validation: (rule) => rule.required(),
18      title: "Description"
19    },
20    {
21      name: "productImage",
22      type: "image",
23      validation: (rule) => rule.required(),
24      title: "Product Image"
25    },
26    {
27      name: "price",
28      type: "number",
29      validation: (rule) => rule.required(),
30      title: "Price"
31    },
32    {
33      name: "tags",
34      type: "array",
35      title: "Tags",
36      of: [{ type: "string" }]
37    }
38  },
39  {
40    name: "discountPercentage",
41    type: "number",
42    title: "Discount Percentage",

44  {
45    name: "isNew",
46    type: "boolean",
47    title: "New Badge",

49 })
```

The status bar at the bottom indicates "Ln 49, Col 3, Spaces: 4, UTF-8, CR/LF, (A) TypeScript, Go Live, Prettier".

The screenshot shows the VS Code interface with the same title bar and project structure. The "TS products.ts" file is open again, but the code has been modified to include two new fields: "discountPercentage" and "isNew". The code now looks like this:

```
src > sanity > schemaTypes > TS products.ts > [e] product

7   fields: [
8     {
9       name: "title",

11      validation: (rule) => rule.required(),
12      type: "string"
13    },
14    {
15      name: "description",
16      type: "text",
17      validation: (rule) => rule.required(),
18      title: "Description"
19    },
20    {
21      name: "productImage",
22      type: "image",
23      validation: (rule) => rule.required(),
24      title: "Product Image"
25    },
26    {
27      name: "price",
28      type: "number",
29      validation: (rule) => rule.required(),
30      title: "Price"
31    },
32    {
